

Internship or part-time contract: EU ETS data analyst

Starting date 1 March 2020.

Location: Brussels, Paris or home-based

Possibility for long-term contract

Do you love finding stories in data and want to apply your skills to do something meaningful about climate change?

Over the last 10 years [Sandbag](#) has been compiling and using unique data sets to pour light on one of the largest climate policies in the world: the European Emissions Trading Scheme. We've won significant changes in policy as a result, including taking out excess permissions to pollute and clamping down on the over use of international offsets. Now, as carbon pricing starts to hit levels that make a difference and there is talk of extending the cap to cover other sectors we are looking for a new analyst to help us increase Europe's efforts to decarbonise fully using strong price signals that drive private sector decision making.

The Role

You'll be working with Sandbag's Brussels team and be responsible for our data analysis - helping us unveil evidence that will win further improvements to the most impactful climate policies in Europe.

We use large publicly available data sets and curate and add to them to present previously unnoticed facts and informed forecasts about what is working and what is not.

You'll be working closely with our management board and alongside our talented advocacy specialist to get our arguments in front of decision makers and stakeholders, so we win more campaigns.

Core tasks

- Analyse upcoming EU ETS 2019 greenhouse gas emissions data
- Contribute to related press releases, briefings and reports
- Update and improve our existing databases and modelling tools
- Develop a detailed understanding of the policies to place data in context

Must Haves

- Demonstrated interest in and commitment to fighting climate change
- Perfect knowledge of MS Excel and Access
- Knowledge of the EU ETS
- An understanding of industrial processes such as steel or cement making
- Ability to communicate complex concepts simply.
- Delivery-focused self-starter, yet able to collaborate effectively.

Helpful To Haves

- Knowledge of other data sources of EU greenhouse gas emissions
- An aptitude for finding stories in data
- European foreign languages

To apply:

Please submit a covering letter and CV to contact@sandbag.be asap and by February 28th 2020
