Job vacancy

Education level

Graduate degree in economics or science

While the power sector is decarbonising rapidly, other sectors of the economy reduce their emissions much more slowly.

Despite a clear political momentum to “do something”, policy making is hindered by the information asymmetry between industry lobbies and the civil society.

Sandbag is aiming to build and share its knowledge on the technical and policy options to decarbonise sectors such as heavy industry, air transport, road transport or buildings.

We are looking for an intern who will research one of these sectors (through reading, interviewing or any other means) and help with our exciting campaigns.

The ideal candidate will:

- care passionately about fighting climate change;
- have some knowledge or curiosity about technical solutions for emissions abatement;
- have some knowledge of policy instrument to reduce emissions;
- have a knack for finding the right information, public or private;
- make the difference between information and propaganda, being able to rate its reliability
- be highly numerate and comfortable with data analysis;
- be familiar with Excel and online data visualising;
- be a quick learner and a self-starter, happy working under their own initiative.
- enjoy networking and establishing new professional relationships.
- be happy working as part of a small organisation punching above its weight to achieve change.

Key information

The position is based in either Brussels, Paris, or home-based, part-time for a fixed term, potentially leading to a permanent job.

Application instructions

Please apply by sending a short covering letter and CV to contact@sandbag.be by 16 August 2020.
